

# Acura/ELS Studio Premium 3D Audio

## Tips for experiencing Acura/ELS Studio® 3D Audio

High quality in equals high quality out. A USB cable connection will produce better detail and sound texture than radio, wireless or *Bluetooth*® connection. Plug your smartphone into the USB port located in the center console – the one with a smartphone illustration on the port cover. From the Home screen, select USB.

- The system brings out even the finest details – start with familiar songs to see and notice elements and textures you’ve never heard before. The 3D Audio system makes all music sound terrific and more present, with added dimension – richer and fuller.
- Use the audio controls to boost the overhead speaker volume for the best effect.
- The Acura/ELS Studio® Premium 3D Audio System sounds like the music is coming from a broad soundstage, larger than the car’s actual interior. Try pinpointing where specific instruments and vocals seem to be coming from across this invisible “3D stage.”
- GRAMMY® Award-winning producer and engineer Elliot Scheiner designed this system for 5.1 channel-encoded audio, which can be difficult to find. Search “5.1 channel music” on YouTube for clips that really show off the system’s deep capabilities, and can impress even the most discerning audiophile.
- You can also consult the following resources for song recommendations showcasing the range and capabilities of the world-class sound system.

[Consumer Reports](#) – Links to music samples on YouTube.

[What HiFi?](#) – Links to demo playlists on each major music streaming platform.

- Play music at low, medium and high volume. Notice how the system produces rich, clear audio at any level.
